Subject: Software Developer (Senior & Intermediate)

Dear Recruitment Team,

I am excited to apply for the Software Developer positions - senior or Intermediate, advertised on Seek. I am a software engineer with over eight years of experience who loves to code and grow. While my core expertise lies in Java and Spring based solutions, I have also delivered projects using Go, JavaScript/Node.js and In my most recent assignment got an opportunity to lead an AI based automation project as well. In my spare time I love to explore the technology side with the help of Python.

I love working in backend technologies. During my tenures at Axiata Digital and Codegen, I contributed significantly to developing CI/CD pipelines using GitHub and Jenkins. I also managed Kubernetes clusters which provided invaluable insights into linux workings and significantly broadened my expertise in both backend architecture and cloud environments like AWS ,GCP and Azure.

Delivering a working solution is hard and communication plays a key role. I truly believe this and make it a priority to keep all relevant stakeholders in sync. Given my past experience as a tech lead and individual contributor , we successfully overcome countless hurdles because we acted as a team and I ensure that I am available to provide guidance and mentorship whenever the team needs support.

I think this opportunity perfectly aligns with my experience, skills and work ethics. I hope to hear from you soon. Thank you for your time.

Kind regards,
Geenath Perera
